Work Experience

Pinterest

Jul 2022 – Present

Software Engineer II (Mar 2024 – Present) - Developer Fundamentals Team

San Francisco, USA

- Optimized EC2-based cloud development environments used across engineering, reducing launch time by X% and improving reliability of local development workflows
- Implemented GPU lifecycle management and approval workflows, enabling scheduled start/stop of large instances and saving \$1M annually in infrastructure costs
- Serve as GitHub platform lead, improving repository workflows and developer tooling across the organization
- Developed an internal VS Code extension marketplace enabling teams to publish and distribute development tooling company-wide
- Develop AI-safe sandboxed development environments enabling secure use of AI coding tools on proprietary codebases

Software Engineer I (Jul 2022 – Feb 2024) - Code & Language Runtime Team

- Led migration of two monorepos (X+ lines of code combined) from Phabricator to GitHub, establishing the migration path later used by other teams across the organization
- Enabled merge queues and standardized CI/CD pipelines supporting large-scale monorepo workflows
- Built tooling and automation for monorepo workflows, improving reliability of builds and developer workflows
- Expanded a Java/Bazel monorepo into a multi-language repository, introducing the first Python service and migrating a Go/Bazel monorepo to support Java, Python, and Go

American Express

May 2021– Aug 2021

Software Engineering Intern

New York, USA

- Created a production level, full stack web application that allows users to perform keyword extraction on text
- This project will allow American Express employees and customers to save hours of time by allowing them to easily extract keywords from very large text documents

Space ML

Jan 2021– Sep 2021

Artificial Intelligence Researcher

Remote

- Our project was selected as a Top 5 AI proposal for NASA SMD's Search for Groundbreaking Science
- I'm working on creating a machine learning pipeline that will run a machine learning model efficiently and reliably on decades of satellite data
- This pipeline is automated, fully scalable, and very efficient, which has saved thousands of dollars

University of Florida

Jan 2021– May 2022

Teaching Assistant - Programming Fundamentals II

Gainesville, USA

- Worked with other TAs and the professor to effectively run an introductory CS class of 500+ students
- Responsible for teaching discussion sections with 25+ students, grading assignments, and hosting office hours
- Required to have an in depth understanding of C++ and the ability to communicate and work well with others

Projects

Battle of the Beats

May 2021– Jul 2021

React, Node, Express, Spotify Web APIs

- Created a full stack web application that allows Spotify users to create new playlists based on a selected song
- Designed to ease the process of discovering new songs and creating new playlists by allowing the user to find similar songs and add them to a new playlist with one click

Technical Skills

Languages & Frameworks: Python, JavaScript/TypeScript, Go, C++, Node.js, GraphQL, Flask, React

Framworks & Tools: Git/GitHub, Claude, Codex, VS Code, Cursor

AI & Developer Tools: Bazel, Buildkite, Jenkins, GitHub Actions, Merge Queues, Docker, AWS (EC2, S3, DynamoDB)

Education

University of Florida

Jul 2018 – May 2022

Bachelor of Science in Computer Science, Minor in Business Administration
